Going beyond just getting a degree

Singapore Management University's Professional Development Series helps mature students develop skills beyond their specific disciplines

POSTGRADUATE education has become increasingly popular. At the Singapore Management University (SMU), enrolment has jumped by 250 per cent since 2011, from under 400 to 1,000 every year. Between 2014 and 2015 alone, the number of

2014 and 2015 alone, the number of students grew by over 20 per cent. This has led SMU, which also offers doctoral and executive educa-tion and research courses, to ex-pand its postgraduate offerings. The university now offers 21 post graduate programmes, and the most popular are the Master of Science in Applied Finance and Master of IT in Business, with an annual intake of 150 and 140 students respectively for 2015.

Business, with an annual intake of 150 and 140 Students respectively for 2015.

An extra cohort was also added to its Master of Science in Management and Master of Professional Accounting programmes last year. Many are drawn to a postgraduate education for various reasons. "It is usually a combination of personal growth and professional opportunities," says Associate Professor Themin Suwardy, SMU's deputy dean of postgraduate professional programmes.

"Some want to join a new field that requires specialised skills such as accounting, while others want to progress in their current workplace or industry by taking on leadership roles. There are also those who want to expand their knowledge in areas professional programme and institution. Prof Themin says: "For example, if you travel often for work and cannot attend classes regularly, look for a programme with a more flexible

curriculum or taught in intensive 'blocks'. If you plan to join a new industry, make sure the programme has appropriate accreditations and recognition."

Where you

study matters

Last year alone, SMU chalked up a string of accolades. Its Executive Master of Business Administration was rated 10th in Asia and 36th in the world to become the highest ranked entrant in the Financial Times EMBA Ranking in 2015. Master of Science in Applied Finance was named second in Asia by the Financial Times Gholal Masters in Finance Was Theorem 100 and 100 a in Financiai Times Globai Masters in Finance Pre-experience Ranking, while its Master of Science in Wealth Management came in third globally in the Financial Times Global Mas-ters in Finance Post-experience

in the Financial Times Global Mas-ters in Finance Post-experience Ranking.

Brit where you study is just as cru-cial, asys Prof Themin. "Like corpo-rate culture," universities have their own characteristics. Find one you canidentify with, and one that clearly understands and actually invests in heir postgraduate programmes and students," he points out.

SMU's postgraduate programmes are boosted by a Professional De-velopment Series (PDS). PDS is a graduate students, who select three workshops based on what they feel are most relevant to their academic or professional development. These workshops has are to be completed dur-ing a student's candidature. To encourage students to partici-pate in PDS workshops, programme calendars at SMU have been syn-chronised as closely as possible, as most postgraduate programmes are shorter than an undegraduate degree—one year for full-time and two for part-time—and can be very time-intensive.

Prof Themin (left) says the PDS workshops will open students' perspectives to the interdisciplinary nature of major world problems, PHOTOS.SMU

Prof Themin describes PDS as an opportunity for SMU students to develop interpersonal and organi-sational skills beyond their specific disciplines. For one, there is a wide range of topics to choose from, in-

cluding influence and advocacy, ne-gotiation, the art of giving feedback, creative thinking, sustainability, leadership and innovation. And by incorporating the latest research from SMU's various insti-tutes, centres, labs and initiatives, these workshops also enable stu-dents from any discipline to learn more about issues like data analyt-ics and service excellence.

Transforming students

"We want to go beyond putting to-gether programmes that earn you a postgraduate degree," says Prof Themin. "To achieve our goal of developing leaders for the knowl-edge-based economy, we want to help transform our students in terms of their world views, com-

word problems. PHOTOS 500

petencies, strategic vision, spirit of collaboration and appetite for problem-solving.
"The workshops will open our students' perspectives to the interdisciplinary nature of the major problems the world faces. For example, you cannot solve sustainability issues purely from the legal or financial perspective; you need organisational leadership, as well an understanding of how businesses, governments and the society can work together, too."

And since these workshops comprise students from across different programmes, the interaction is expected to be more meaningful and Fruitful, he adds.

Students are also provided with excellent networking opportunities

as they get to know like-minded individuals from other disciplines.
Meanwhile, as part of SMU's efforts to constantly enhance educational offerings and explore new opportunities, the university recently
rolled out a Master of Human Capital Leadership programme.
Designed in collaboration with
the Human Capital Leadership
Institute, Chartered Institute of
Personnel and Development, and
Wharton's Center for Human Resources, it addresses the challenges
of human resources among business leaders in Asia.
