

CERTIFICATE IN ACCOUNTING DATA AND ANALYTICS

COURSE OVERVIEW

The Certificate in Accounting Data and Analytics programme is designed for accounting professionals who are interested in learning more about applying data technology into their domain knowledge to solve business problems. This four-day programme will give participants an overview of how data and analytics can be applied in accounting, and also teach them key skillsets that they can apply in their work.

CURRICULUM STRUCTURE

The Certificate in Accounting Data and Analytics will consist of the following four courses:

- 1) Introduction to accounting data and analytics
- 2) Data management
- 3) Data modelling and forecasting
- 4) Data visualization and dash-boarding

The introduction to accounting data and analytics course will give students an overview of how data and analytics can be applied in accounting while the other three courses will teach them key skillsets that they can apply in their work.

DURATION

The programme consists of 4 modules conducted over 4 consecutive days. Each module is conducted over 1 day.
